Flowfox collaborates with the Digital Container Shipping Association (DCSA)

Flowfox is pleased to announce its collaboration with the Digital Container Shipping Association [DCSA](#) to support the development of global, digital standards for the import container release.

Flowfox will be contributing to meet the goal of DCSA making shipping services easy to use, flexible, efficient, reliable and environmentally friendly.

Patrick Pehmöller, CEO of Flowfox, outlines the challenges:

“The container release processes today are typically manual, relying on non-standard information exchanges that differ across multiple parties and locations, making the process highly inefficient.

In early 2019 we started building our solutions, and we are excited to support DCSA in the creation of global standards leading to an efficient flow of import containers and information”.

About Flowfox

Flowfox has developed an all-in-one import platform to simplify the business for ocean carriers, forwarders and importers.

The Flowfox platform covers the following processes amongst others:

- Container Release
- Container Reuse
- Drop-off Change
- Pickup Change
- C/H Instructions
